

ABSTRACT OF THE DISCLOSURE

In a method for data transmission for allowing access from a remote unit to at least one automation device via a standard browser, data are transmitted between the remote unit and the automation device(s) via an interconnected data conversion unit. The automation device(s) and the data conversion unit exchange data according to a first communication protocol. The data conversion unit and the remote unit exchange data according to a second communication protocol. The data conversion unit converts the data from the first communication protocol to the second communication protocol.
